

The Zefiro workstation takes its name

from the god of greek mythology who blew the oceans waves and gave birth to Venus the goddess of beauty. It's design is inspired by **purity, lightness** and **innovation**.

Zefiro is a natural evolution of the office environment to a higher level of awareness and understanding. Utilizing innovative technologies, the manufacture of this sophisticated product is focused on promoting environmentally conscious engineering.

The overall result is a clean, functional and **harmonious environment**.

Zefiro has been selected by the Permanent Design Observatory for it's publication in **ADI Design Index 2003**.

Zefiro has been selected by the Permanent Design Observatory

99.7% of Zefiro components is recyclable.

Consistent with 'Green Design' initiatives Zefiro combines **natural** and **ecological** materials such as crystal, glass, metal and wood. All materials have been selected following intensive environmental research. This research has determined and achieved the following:

- All materials used in the manufacture of Zefiro are **homogenous** allowing the separate recycling of each component.
- Detailed studies into materials and their limits of resistance have allowed us to reduce the thickness of the work surface to the absolute essential, **saving wood materials**.
- All particle board panels have achieved **class E1** regarding the emission of formaldehyde
- no Zefiro veneers are mentioned in the **CITES** List (CITES - Convention on International Trade in Endangered Species of Wild Fauna and Flora: it is an international agreement between Governments. Its aim is to ensure that international trade in specimens of wild animals and plants does not threaten their survival).
- the suppliers of wood raw materials used to manufacture Zefiro are **"ECOLOGICAL PANEL"** and **"PROGETTO ECOQUALITA"** (eco-quality project), ISO 14001 certified. (**ECOLOGICAL PANEL"** and **"PROGETTO ECOQUALITA"** are organizations that check the origins of the wood materials and make sure they come from forests and plantations that are managed in accordance with the Forest safeguard criteria. Literally the Ecological Panel is a recycled wood panel used in the furniture manufacturing. It is environmentally friendly and helps to save the environment, because it doesn't require tree felling).

99,7%

ZEFIRO material recyclability.

100%

ZEFIRO packaging reutilization and recyclability.

100%

reutilization of ZEFIRO wooden, aluminum and plastic material.

ergonomics

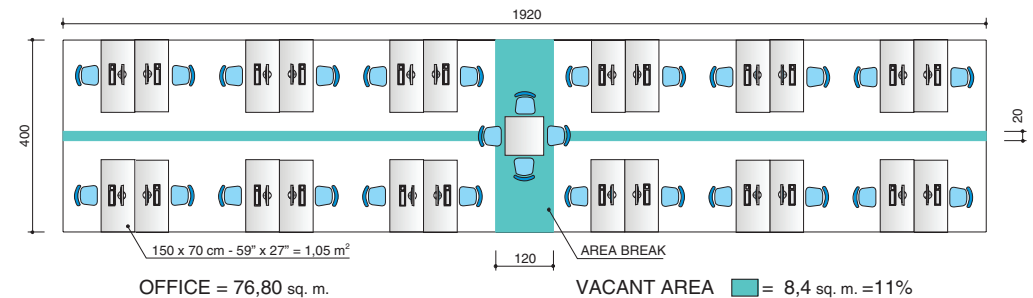

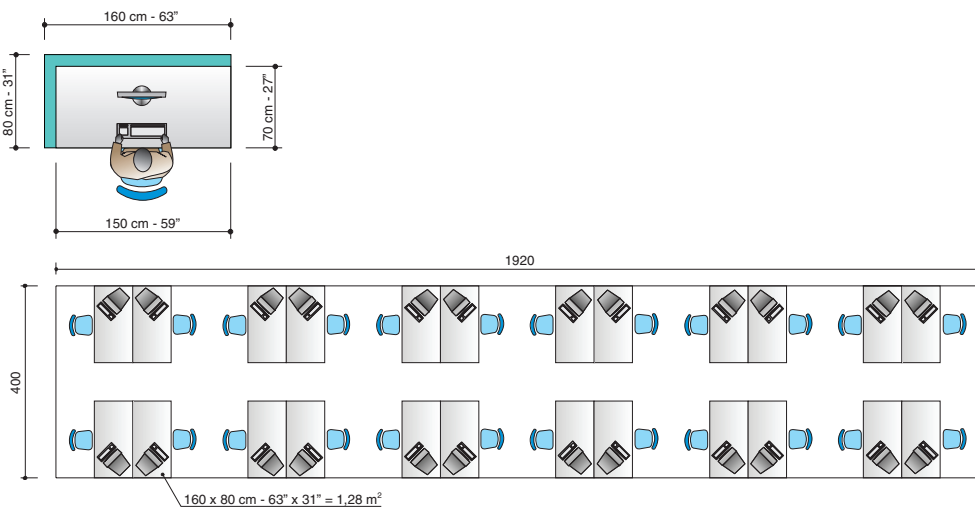

Zefiro has been selected by the Permanent Design Observatory

design Mirko Antonel

150 x 70 cm (W. 59" x D. 27 1/2")

Zefiro's innovative dimensions redefine the standards for office design. Zefiro has been developed for the modern office where the introduction of flat screen monitors reduces the desk worksurface requirement. Zefiro's unique dimensions not only allow a greater quantity of workstations within the one area but in turn **freed space** for future expansion or alternative creative design. A desk top of dimensions 150 x 70 cm (W. 59" x D. 27 1/2") with a flat screen monitor offers the equivalent desk space to a traditional 160 x 80 cm (63" x 31 1/2") with standard monitor. These innovative workstation dimensions will also give you **18% more usable floor space**. The example below demonstrates how Zefiro can save you space without compromising the users ergonomic requirements.

Changing concepts of workspace

have significantly altered the features of modern office furniture systems. Businesses today demand **flexible** office systems. Furniture that is **easy to manage, reconfigure** and **adapt** to the different demands that a particular work area may have. Furthermore given the pace and frequency of change within to-days workplace, it is more essential than ever that office systems can be reconfigured or moved at **reduced costs** preferably without the assistance of qualified technicians. Zefiro responds to these demands in two significant ways:

The Zefiro desks supporting frame composed of horizontal bars and structural legs connect with **simple pins** which are pre-fitted at the top of the legs

A patented, innovative **magnet solution** allows the work surface to be fitted to the frame with absolute minimal effort. Assembly and reconfiguration is **fast** and **simple**.
